

Diebold SecureStat®

VIEW, MEASURE AND CONTROL YOUR SECURITY WORLD

Revolutionize the way you interact with your security.

Diebold SecureStat® equips you with Web-based tools and information to reduce overall risk to your business with full security management through a single custom dashboard. Integrating with any equipment and available on any smart device, anytime, anywhere, SecureStat makes comprehensive security management a reality.

- Powerful
- Flexible
- Secure
- Easy, Simple Interface

Intuitive Security Management

Diebold's industry leading SecureStat gives you a personalized dashboard that can provide a snapshot of your entire security platform, including your locations, security systems and devices via customizable distinct widgets. From this powerful, interactive dashboard, you can view, measure and control:

- **Intrusion:** Remotely arm, disarm, check status, bypass and manage your alarm systems, regardless of location or platform
- **Alerts:** Monitor alarm or non-standard activity, perform device health checks, generate reports and configure notifications
- **Monitoring:** View alarm account data and activity, put systems in/out of test mode and more, for a single site or for all of your sites
- **Access:** Determine how and when facilities are accessed by modifying or deleting cardholders, remotely locking/unlocking doors and managing access schedules
- **Health Check:** Ensure video system performance with continuous monitoring of video servers for network connectivity, recording status, video loss, hard drive operation and capacity, component temperature and more
- **Cloud Storage:** Your video can easily and seamlessly be saved to and retrieved from cloud storage exclusively or in combination with local IP storage, with live view capability, at all times, from anywhere
- **Account Management:** Reference site maps, account detail, audit information, request service and see relevant breaking news stories

Key Advantages of Diebold's SecureStat

Empower your security systems and devices to communicate more effectively and securely, and in turn, be empowered to manage your security operations like never before.

- **Flexible integration:** Use the security products—hardware, software, monitoring or otherwise—that suit your needs, as Diebold's SecureStat is designed for interoperability
- **Secure deployment:** Thanks to an SSL-encrypted connection that operates via standard Internet pathways, access is easy and your data is secure; encrypted access certificates and multifactor authentication ensure platform access is easy to manage but always secure
- **Native Web architecture:** Experience convenient, seamless access to your dashboard via any browser or smart device
- **Simple scaling:** Interact with all of your security systems and services regardless of organization size or geographic distribution
- **Easy to use:** Simply select and place widgets on the dashboard to gain access to various functions
